

CovidAPI

Generated by Doxygen 1.9.8

Chapter 1

Namespace Index

1.1 Package List

Here are the packages with brief descriptions (if available):

CovidAPI	..	??
CovidAPI.Models	..	??
CovidAPI.Services	..	??
CovidAPI.Services.Rest	..	??

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

ControllerBase	
AuthController	??
CovidDataController	??
CovidAPI.Models.CovidData	??
CovidAPI.Models.CovidDataDTO	??
DbContext	
ApplicationDbContext	??
CovidAPI.Models.ErrorResponse	??
GeolocationApiResponse	??
GeolocationCache	??
GeolocationComponents	??
GeolocationResult	??
Geometry	??
IAuthService	??
AuthService	??
CovidAPI.Services.Rest.ICovidDataService	??
CovidAPI.Services.Rest.CovidDataService	??
IGeolocationService	??
GeolocationService	??
IPasswordService	??
PasswordService	??
IUserService	??
UserService	??
CovidAPI.Models.JwtSettings	??
CovidAPI.Models.LoginRequestDTO	??
Program	??
CovidAPI.Models.RegisterRequestDTO	??
CovidAPI.Startup	??
CovidAPI.Models.User	??

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

ApplicationDbContext	Represents the database context for the application, providing access to data entities	??
AuthController	Controller for authentication-related operations	??
AuthService	Service responsible for user authentication and JWT token generation	??
CovidAPI.Models.CovidData	Represents the Covid-19 data stored in the database	??
CovidDataController	Controller for COVID-19 data-related operations	??
CovidAPI.Models.CovidDataDTO	Represents a Data Transfer Object (DTO) for presenting Covid-19 data	??
CovidAPI.Services.Rest.CovidDataService	Service responsible for handling COVID-19 data operations, including fetching, updating, and deleting data	??
CovidAPI.Models.ErrorResponse	Represents an error response containing information about an error	??
GeolocationApiResponse	Represents the response from a geolocation API	??
GeolocationCache	Represents a cache for storing geolocation data to avoid redundant API calls	??
GeolocationComponents	Represents the components of a geolocation	??
GeolocationResult	Represents a geolocation result	??
GeolocationService	Represents a service for retrieving geolocation information for a specific country	??
Geometry	Represents the geometry information of a geolocation	??
IAuthService	Defines authentication service methods	??
CovidAPI.Services.Rest.ICovidDataService	Defines methods for retrieving and managing COVID-19 data	??
IGeolocationService	Represents a service for retrieving geolocation information related to COVID-19 data	??

IPasswordService	
Represents a service for hashing, verifying passwords, and generating password salts	??
IUserService	
Represents a service for managing user-related operations	??
CovidAPI.Models.JwtSettings	
Represents the settings for JSON Web Token (JWT) authentication	??
CovidAPI.Models.LoginRequestDTO	
Represents the data transfer object (DTO) for user login requests	??
PasswordService	
Service for hashing, verifying passwords, and generating salts using BCrypt	??
Program	
The entry point class for the application	??
CovidAPI.Models.RegisterRequestDTO	
Represents the data transfer object (DTO) for user registration requests	??
CovidAPI.Startup	
Configures the application services and requests during startup	??
CovidAPI.Models.User	
Represents a user entity	??
UserService	
Service for user-related operations, including authentication and user retrieval	??

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

Program.cs	??
Startup.cs	??

Chapter 5

Namespace Documentation

5.1 CovidAPI Namespace Reference

Namespaces

- namespace **Models**
- namespace **Services**

Classes

- class **Startup**
Configures the application services and requests during startup.

5.2 CovidAPI.Models Namespace Reference

Classes

- class **CovidData**
Represents the Covid-19 data stored in the database.
- class **CovidDataDTO**
Represents a Data Transfer Object (DTO) for presenting Covid-19 data.
- class **ErrorResponse**
Represents an error response containing information about an error.
- class **JwtSettings**
Represents the settings for JSON Web Token (JWT) authentication.
- class **LoginRequestDTO**
Represents the data transfer object (DTO) for user login requests.
- class **RegisterRequestDTO**
Represents the data transfer object (DTO) for user registration requests.
- class **User**
Represents a user entity.

5.3 CovidAPI.Services Namespace Reference

Namespaces

- namespace **Rest**

5.4 CovidAPI.Services.Rest Namespace Reference

Classes

- class **CovidDataService**
Service responsible for handling COVID-19 data operations, including fetching, updating, and deleting data.
- interface **ICovidDataService**
Defines methods for retrieving and managing COVID-19 data.

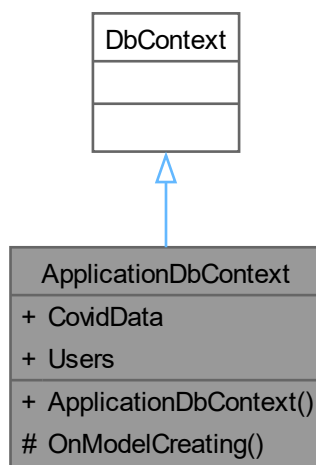

Chapter 6

Class Documentation

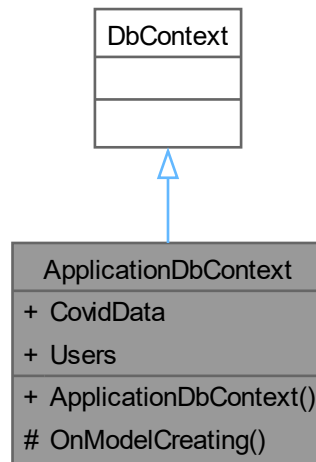

6.1 ApplicationDbContext Class Reference

Represents the database context for the application, providing access to data entities.

Inheritance diagram for ApplicationDbContext:

Collaboration diagram for ApplicationDbContext:

Public Member Functions

- **ApplicationDbContext** (DbContextOptions< **ApplicationDbContext** > options)
*Initializes a new instance of the **ApplicationDbContext** (p. ??) class.*

Protected Member Functions

- override void **OnModelCreating** (ModelBuilder modelBuilder)
Configures the model for the database context.

Properties

- DbSet< **CovidData** > **CovidData** [get, set]
Gets or sets the DbSet for CovidData entities in the database.
- DbSet< **User** > **Users** [get, set]
Gets or sets the DbSet for User entities in the database.

6.1.1 Detailed Description

Represents the database context for the application, providing access to data entities.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 ApplicationDbContext()

```
ApplicationDbContext.ApplicationDbContext (
    DbContextOptions< ApplicationDbContext > options )
```

Initializes a new instance of the **ApplicationDbContext** (p. ??) class.

Parameters

<i>options</i>	The options for configuring the DbContext.
----------------	--

6.1.3 Member Function Documentation

6.1.3.1 OnModelCreating()

```
override void ApplicationDbContext.OnModelCreating (
    modelBuilder modelBuilder ) [protected]
```

Configures the model for the database context.

Parameters

<i>modelBuilder</i>	The builder used to construct the model for the DbContext.
---------------------	--

6.1.4 Property Documentation

6.1.4.1 CovidData

```
DbSet< CovidData> ApplicationDbContext.CovidData [get], [set]
```

Gets or sets the DbSet for CovidData entities in the database.

6.1.4.2 Users

```
DbSet< User> ApplicationDbContext.Users [get], [set]
```

Gets or sets the DbSet for User entities in the database.

The documentation for this class was generated from the following file:

- Data/ **ApplicationDbContext.cs**

6.2 AuthController Class Reference

Controller for authentication-related operations.

Inheritance diagram for AuthController:

Collaboration diagram for AuthController:

Public Member Functions

- **AuthController** (**IAuthService** authService, **IUserService** userService)

*Initializes a new instance of the **AuthController** (p. ??) class.*

- `async Task< IActionResult > Login ([FromBody] LoginRequestDTO request)`

Logs in a user.

- `async Task< IActionResult > Register ([FromBody] RegisterRequestDTO request)`

Registers a new user.

- `async Task< IActionResult > Logout ()`

Logs out the currently authenticated user.

6.2.1 Detailed Description

Controller for authentication-related operations.

6.2.2 Constructor & Destructor Documentation

6.2.2.1 AuthController()

```
AuthController.AuthController (
    IAuthService authService,
    IUserService userService )
```

Initializes a new instance of the **AuthController** (p. ??) class.

Parameters

<i>authService</i>	The authentication service.
<i>userService</i>	The user service.

6.2.3 Member Function Documentation

6.2.3.1 Login()

```
async Task< IActionResult > AuthController.Login (
    [FromBody] LoginRequestDTO request )
```

Logs in a user.

Parameters

<i>request</i>	The login request.
----------------	--------------------

Returns

Returns a JWT token if login is successful.

6.2.3.2 Logout()

```
async Task< IActionResult > AuthController.Logout ( )
```

Logs out the currently authenticated user.

Returns

Returns a success message upon successful logout.

6.2.3.3 Register()

```
async Task< IActionResult > AuthController.Register (
    [FromBody] RegisterRequestDTO request )
```

Registers a new user.

Parameters

<i>request</i>	The registration request.
----------------	---------------------------

Returns

Returns a success message and JWT token if registration is successful.

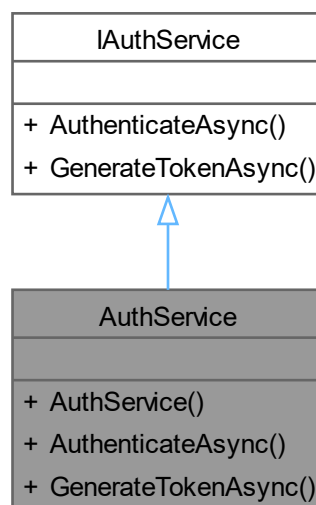

The documentation for this class was generated from the following file:

- Controllers/ **AuthController.cs**

6.3 AuthService Class Reference

Service responsible for user authentication and JWT token generation.

Inheritance diagram for AuthService:

Collaboration diagram for AuthService:

Public Member Functions

- **AuthService** (**IUserService** userService, IConfiguration configuration, **IPasswordService** passwordService)
*Initializes a new instance of the **AuthService** (p. ??) class.*
- async Task< string > **AuthenticateAsync** (string username, string password)
Authenticates a user based on the provided username and password.
- async Task< string > **GenerateTokenAsync** (**User** user)
Generates a JWT token for the specified user.

6.3.1 Detailed Description

Service responsible for user authentication and JWT token generation.

6.3.2 Constructor & Destructor Documentation

6.3.2.1 AuthService()

```

AuthService.AuthService (
    IUserService userService,
    IConfiguration configuration,
    IPasswordService passwordService )
  
```

Initializes a new instance of the **AuthService** (p. ??) class.

Parameters

<i>userService</i>	The user service.
<i>configuration</i>	The configuration.
<i>passwordService</i>	The password service.

6.3.3 Member Function Documentation

6.3.3.1 AuthenticateAsync()

```
async Task< string > AuthService.AuthenticateAsync (
    string username,
    string password )
```

Authenticates a user based on the provided username and password.

Parameters

<i>username</i>	The username of the user.
<i>password</i>	The password of the user.

Returns

The JWT token if authentication is successful; otherwise, null.

Implements **IAuthService** (p. ??).

Here is the call graph for this function:

6.3.3.2 GenerateTokenAsync()

```
async Task< string > AuthService.GenerateTokenAsync (
    User user )
```

Generates a JWT token for the specified user.

Parameters

<i>user</i>	The user for whom the token should be generated.
-------------	--

Returns

The generated JWT token.

Implements **IAuthService** (p. ??).

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- Services/Rest/ **AuthService.cs**

6.4 CovidAPI.Models.CovidData Class Reference

Represents the Covid-19 data stored in the database.

Collaboration diagram for CovidAPI.Models.CovidData:

CovidAPI.Models.CovidData
<ul style="list-style-type: none">+ Id+ Country+ CountryCode+ Year+ Week+ Region+ RegionName+ NewCases+ TestsDone+ Population+ TestingRate+ PositivityRate+ TestingDataSource

Properties

- int **Id** [get, set]
Gets or sets the unique identifier for the Covid-19 data.
- string? **Country** [get, set]
Gets or sets the name of the country where the data belongs.
- string? **CountryCode** [get, set]
Gets or sets the country code for the data.
- int **Year** [get, set]
Gets or sets the year for which the data is recorded.
- string? **Week** [get, set]
Gets or sets the week within the year for which the data is recorded.
- string? **Region** [get, set]
Gets or sets the region where the data is recorded.
- string? **RegionName** [get, set]
Gets or sets the name of the region where the data is recorded.
- int **NewCases** [get, set]
Gets or sets the number of new cases reported.
- int **TestsDone** [get, set]
Gets or sets the number of tests conducted.
- int **Population** [get, set]
Gets or sets the population of the region.
- double **TestingRate** [get, set]

Gets or sets the rate of testing.

- double **PositivityRate** [get, set]

Gets or sets the positivity rate of the tests conducted.

- string? **TestingDataSource** [get, set]

Gets or sets the source of testing data.

6.4.1 Detailed Description

Represents the Covid-19 data stored in the database.

6.4.2 Property Documentation

6.4.2.1 Country

```
string? CovidAPI.Models.CovidData.Country [get], [set]
```

Gets or sets the name of the country where the data belongs.

6.4.2.2 CountryCode

```
string? CovidAPI.Models.CovidData.CountryCode [get], [set]
```

Gets or sets the country code for the data.

6.4.2.3 Id

```
int CovidAPI.Models.CovidData.Id [get], [set]
```

Gets or sets the unique identifier for the Covid-19 data.

6.4.2.4 NewCases

```
int CovidAPI.Models.CovidData.NewCases [get], [set]
```

Gets or sets the number of new cases reported.

6.4.2.5 Population

```
int CovidAPI.Models.CovidData.Population [get], [set]
```

Gets or sets the population of the region.

6.4.2.6 PositivityRate

```
double CovidAPI.Models.CovidData.PositivityRate [get], [set]
```

Gets or sets the positivity rate of the tests conducted.

6.4.2.7 Region

```
string? CovidAPI.Models.CovidData.Region [get], [set]
```

Gets or sets the region where the data is recorded.

6.4.2.8 RegionName

```
string? CovidAPI.Models.CovidData.RegionName [get], [set]
```

Gets or sets the name of the region where the data is recorded.

6.4.2.9 TestingDataSource

```
string? CovidAPI.Models.CovidData.TestingDataSource [get], [set]
```

Gets or sets the source of testing data.

6.4.2.10 TestingRate

```
double CovidAPI.Models.CovidData.TestingRate [get], [set]
```

Gets or sets the rate of testing.

6.4.2.11 TestsDone

```
int CovidAPI.Models.CovidData.TestsDone [get], [set]
```

Gets or sets the number of tests conducted.

6.4.2.12 Week

```
string? CovidAPI.Models.CovidData.Week [get], [set]
```

Gets or sets the week within the year for which the data is recorded.

6.4.2.13 Year

```
int CovidAPI.Models.CovidData.Year [get], [set]
```

Gets or sets the year for which the data is recorded.

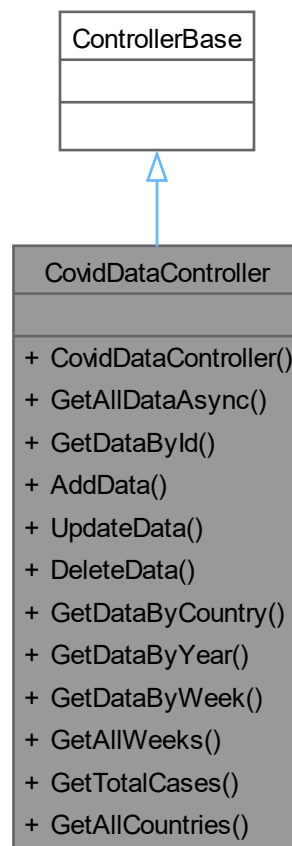

The documentation for this class was generated from the following file:

- Models/ **CovidData.cs**

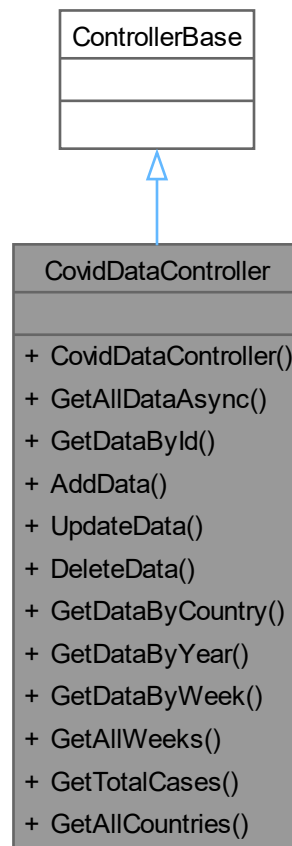

6.5 CovidDataController Class Reference

Controller for COVID-19 data-related operations.

Inheritance diagram for CovidDataController:

Collaboration diagram for CovidDataController:

Public Member Functions

- **CovidDataController** (**ICovidDataService** covidDataService, **IGeolocationService** geolocationService)
*Initializes a new instance of the **CovidDataController** (p. ??) class.*
- async Task< IEnumerable< **CovidDataDTO** > > **GetAllDataAsync** ()
Gets all COVID-19 data asynchronously.
- async Task< ActionResult< **CovidDataDTO** > > **GetDataById** (int id)
- async Task< ActionResult< **CovidDataDTO** > > **AddData** ([FromBody] **CovidDataDTO** covidDataDTO)
Adds new COVID-19 data.
- async Task< IActionResult > **UpdateData** (int id, [FromBody] **CovidDataDTO** covidDataDTO)
Updates COVID-19 data by ID.
- async Task< IActionResult > **DeleteData** (int id)
Deletes COVID-19 data by ID.
- async Task< ActionResult< IEnumerable< **CovidDataDTO** > > > **GetDataByCountry** (string country)
Gets COVID-19 data by country.
- async Task< ActionResult< IEnumerable< **CovidDataDTO** > > > **GetDataByYear** (int year)
Gets COVID-19 data by year.
- async Task< ActionResult< IEnumerable< **CovidDataDTO** > > > **GetDataByWeek** (string week)

Gets COVID-19 data by week.

- `async Task< ActionResult< IEnumerable< string > > > GetAllWeeks ()`

Gets all available weeks for COVID-19 data.

- `async Task< ActionResult< IEnumerable< CovidDataDTO > > > GetTotalCases ()`

Gets total COVID-19 cases.

- `async Task< ActionResult< IEnumerable< string > > > GetAllCountries ()`

Gets a list of all countries with available COVID-19 data.

6.5.1 Detailed Description

Controller for COVID-19 data-related operations.

6.5.2 Constructor & Destructor Documentation

6.5.2.1 CovidDataController()

```
CovidDataController.CovidDataController (
    ICovidDataService covidDataService,
    IGeolocationService geolocationService )
```

Initializes a new instance of the **CovidDataController** (p. ??) class.

Parameters

<i>covidDataService</i>	The COVID-19 data service.
<i>geolocationService</i>	The geolocation service.

6.5.3 Member Function Documentation

6.5.3.1 AddData()

```
async Task< ActionResult< CovidDataDTO > > CovidDataController.AddData (
    [FromBody] CovidDataDTO covidDataDTO )
```

Adds new COVID-19 data.

Parameters

<i>covidDataDTO</i>	The COVID-19 data to add.
---------------------	---------------------------

Returns

Returns the added COVID-19 data.

Here is the call graph for this function:

**6.5.3.2 DeleteData()**

```
async Task< IActionResult > CovidDataController.DeleteData (
    int id )
```

Deletes COVID-19 data by ID.

Parameters

<i>id</i>	The ID of the COVID-19 data to delete.
-----------	--

Returns

Returns no content if the deletion is successful.

6.5.3.3 GetAllCountries()

```
async Task< ActionResult< IEnumerable< string > > > CovidDataController.GetAllCountries ( )
```

Gets a list of all countries with available COVID-19 data.

Returns

Returns a list of all countries with available COVID-19 data.

6.5.3.4 GetAllDataAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidDataController.GetAllDataAsync ( )
```

Gets all COVID-19 data asynchronously.

Returns

Returns a collection of COVID-19 data.

6.5.3.5 GetAllWeeks()

```
async Task< ActionResult< IEnumerable< string > > > CovidDataController.GetAllWeeks ( )
```

Gets all available weeks for COVID-19 data.

Returns

Returns a collection of all available weeks.

6.5.3.6 GetDataByCountry()

```
async Task< ActionResult< IEnumerable< CovidDataDTO > > > CovidDataController.GetDataByCountry (
    string country )
```

Gets COVID-19 data by country.

Parameters

<i>country</i>	The name of the country.
----------------	--------------------------

Returns

Returns COVID-19 data for the specified country.

6.5.3.7 GetDataById()

```
async Task< ActionResult< CovidDataDTO > > CovidDataController.GetDataById (
    int id )
```

Gets COVID-19 data by ID asynchronously.

Parameters

<i>id</i>	The ID of the COVID-19 data.
-----------	------------------------------

Returns

Returns COVID-19 data with the specified ID.

Here is the caller graph for this function:

6.5.3.8 GetDataByWeek()

```
async Task< ActionResult< IEnumerable< CovidDataDTO > > > CovidDataController.GetDataByWeek  
(  
    string week )
```

Gets COVID-19 data by week.

Parameters

<i>week</i>	The week for which to retrieve data.
-------------	--------------------------------------

Returns

Returns COVID-19 data for the specified week.

6.5.3.9 GetDataByYear()

```
async Task< ActionResult< IEnumerable< CovidDataDTO > > > CovidDataController.GetDataByYear  
(  
    int year )
```

Gets COVID-19 data by year.

Parameters

<i>year</i>	The year for which to retrieve data.
-------------	--------------------------------------

Returns

Returns COVID-19 data for the specified year.

6.5.3.10 GetTotalCases()

```
async Task< ActionResult< IEnumerable< CovidDataDTO > > > CovidDataController.GetTotalCases  
( )
```

Gets total COVID-19 cases.

Returns

Returns total COVID-19 cases.

6.5.3.11 UpdateData()

```
async Task< IActionResult > CovidDataController.UpdateData (  
    int id,  
    [FromBody] CovidDataDTO covidDataDTO )
```

Updates COVID-19 data by ID.

Parameters

<i>id</i>	The ID of the COVID-19 data to update.
<i>covidDataDTO</i>	The updated COVID-19 data.

Returns

Returns no content if the update is successful.

The documentation for this class was generated from the following file:

- Controllers/ **CovidDataController.cs**

6.6 CovidAPI.Models.CovidDataDTO Class Reference

Represents a Data Transfer Object (DTO) for presenting Covid-19 data.

Collaboration diagram for CovidAPI.Models.CovidDataDTO:

CovidAPI.Models.CovidDataDTO	
+	Id
+	Country
+	CountryCode
+	Year
+	Week
+	Region
+	RegionName
+	NewCases
+	TestsDone
+	Population
	and 9 more...

Properties

- **int Id** [get, set]
Gets or sets the unique identifier for the Covid-19 data.
- **string Country** [get, set]
Gets or sets the name of the country where the data belongs.
- **string CountryCode** [get, set]
Gets or sets the country code for the data.
- **int Year** [get, set]
Gets or sets the year for which the data is recorded.
- **string Week** [get, set]
Gets or sets the week within the year for which the data is recorded.
- **string Region** [get, set]
Gets or sets the region where the data is recorded.
- **string RegionName** [get, set]
Gets or sets the name of the region where the data is recorded.
- **int NewCases** [get, set]
Gets or sets the number of new cases reported.
- **int TestsDone** [get, set]
Gets or sets the number of tests conducted.
- **int Population** [get, set]
Gets or sets the population of the region.
- **double PositivityRate** [get, set]
Gets or sets the positivity rate of the tests conducted.
- **double TestingRate** [get, set]
Gets or sets the rate of testing.
- **string TestingDataSource** [get, set]
Gets or sets the source of testing data.
- **int? TotalCasesYear** [get, set]
Gets or sets the total cases reported in a specific year.
- **int? TotalTestsYear** [get, set]
Gets or sets the total tests conducted in a specific year.
- **double? PerCapitaCases** [get, set]
Gets or sets the per capita cases (cases per population) for the data.
- **double? PerCapitaTests** [get, set]
Gets or sets the per capita tests (tests per population) for the data.
- **GeolocationComponents? Geolocation** [get, set]
Gets or sets the geolocation information for the data.
- **Geometry? Geometry** [get, set]
Gets or sets the geometric information for the data.

6.6.1 Detailed Description

Represents a Data Transfer Object (DTO) for presenting Covid-19 data.

6.6.2 Property Documentation

6.6.2.1 Country

```
string CovidAPI.Models.CovidDataDTO.Country [get], [set]
```

Gets or sets the name of the country where the data belongs.

6.6.2.2 CountryCode

```
string CovidAPI.Models.CovidDataDTO.CountryCode [get], [set]
```

Gets or sets the country code for the data.

6.6.2.3 Geolocation

```
GeolocationComponents? CovidAPI.Models.CovidDataDTO.Geolocation [get], [set]
```

Gets or sets the geolocation information for the data.

6.6.2.4 Geometry

```
Geometry? CovidAPI.Models.CovidDataDTO.Geometry [get], [set]
```

Gets or sets the geometric information for the data.

6.6.2.5 Id

```
int CovidAPI.Models.CovidDataDTO.Id [get], [set]
```

Gets or sets the unique identifier for the Covid-19 data.

6.6.2.6 NewCases

```
int CovidAPI.Models.CovidDataDTO.NewCases [get], [set]
```

Gets or sets the number of new cases reported.

6.6.2.7 PerCapitaCases

```
double? CovidAPI.Models.CovidDataDTO.PerCapitaCases [get], [set]
```

Gets or sets the per capita cases (cases per population) for the data.

6.6.2.8 PerCapitaTests

```
double? CovidAPI.Models.CovidDataDTO.PerCapitaTests [get], [set]
```

Gets or sets the per capita tests (tests per population) for the data.

6.6.2.9 Population

```
int CovidAPI.Models.CovidDataDTO.Population [get], [set]
```

Gets or sets the population of the region.

6.6.2.10 PositivityRate

```
double CovidAPI.Models.CovidDataDTO.PositivityRate [get], [set]
```

Gets or sets the positivity rate of the tests conducted.

6.6.2.11 Region

```
string CovidAPI.Models.CovidDataDTO.Region [get], [set]
```

Gets or sets the region where the data is recorded.

6.6.2.12 RegionName

```
string CovidAPI.Models.CovidDataDTO.RegionName [get], [set]
```

Gets or sets the name of the region where the data is recorded.

6.6.2.13 TestingDataSource

```
string CovidAPI.Models.CovidDataDTO.TestingDataSource [get], [set]
```

Gets or sets the source of testing data.

6.6.2.14 TestingRate

```
double CovidAPI.Models.CovidDataDTO.TestingRate [get], [set]
```

Gets or sets the rate of testing.

6.6.2.15 TestsDone

```
int CovidAPI.Models.CovidDataDTO.TestsDone [get], [set]
```

Gets or sets the number of tests conducted.

6.6.2.16 TotalCasesYear

```
int? CovidAPI.Models.CovidDataDTO.TotalCasesYear [get], [set]
```

Gets or sets the total cases reported in a specific year.

6.6.2.17 TotalTestsYear

```
int? CovidAPI.Models.CovidDataDTO.TotalTestsYear [get], [set]
```

Gets or sets the total tests conducted in a specific year.

6.6.2.18 Week

```
string CovidAPI.Models.CovidDataDTO.Week [get], [set]
```

Gets or sets the week within the year for which the data is recorded.

6.6.2.19 Year

```
int CovidAPI.Models.CovidDataDTO.Year [get], [set]
```

Gets or sets the year for which the data is recorded.

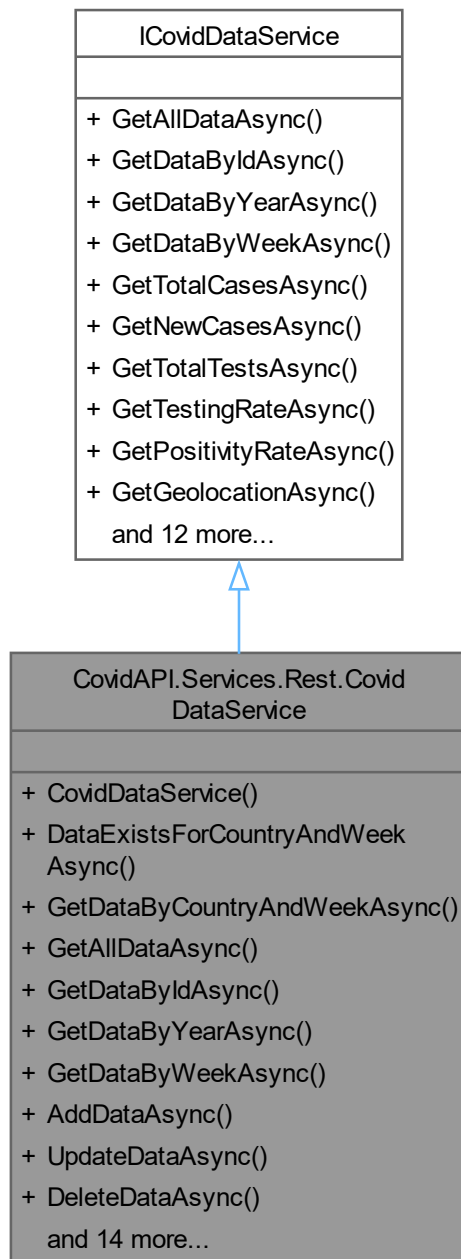

The documentation for this class was generated from the following file:

- Models/ **CovidDataDTO.cs**

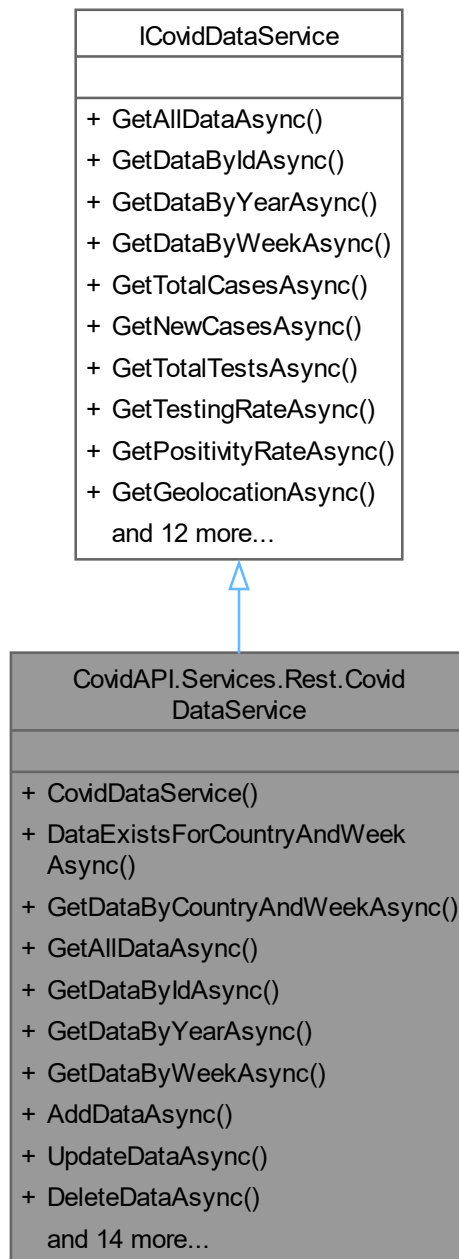

6.7 CovidAPI.Services.Rest.CovidDataService Class Reference

Service responsible for handling COVID-19 data operations, including fetching, updating, and deleting data.

Inheritance diagram for CovidAPI.Services.Rest.CovidDataService:

Collaboration diagram for CovidAPI.Services.Rest.CovidDataService:

Public Member Functions

- **CovidDataService** (**ApplicationDbContext** context, **IGeolocationService** geolocationService, **ILogger< CovidDataService >** logger, **GeolocationCache** geolocationCache, **IOptions< DbContextOptions< ApplicationDbContext > >** dbContextOptions)
- **async Task< bool > DataExistsForCountryAndWeekAsync** (string country, string week)
Checks if data exists for a specific country and week.

- async Task< **CovidData** > **GetDataByCountryAndWeekAsync** (string country, string week)
- async Task< IEnumerable< **CovidDataDTO** > > **GetAllDataAsync** (bool includeGeolocation)
Retrieves all COVID-19 data as DTOs, optionally including geolocation information.
- async Task< **CovidDataDTO** > **GetDataByIdAsync** (int id, bool includeGeolocation)
Retrieves COVID-19 data for a specific ID.
- async Task< IEnumerable< **CovidDataDTO** > > **GetDataByYearAsync** (int year, bool includeGeolocation)
Retrieves COVID-19 data for a specific year, optionally including geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetDataByWeekAsync** (string week, bool includeGeolocation)
Retrieves COVID-19 data for a specific week, optionally including geolocation information.
- async Task **AddDataAsync** (**CovidDataDTO** covidDataDTO)
Adds COVID-19 data to the database.
- async Task **UpdateDataAsync** (**CovidDataDTO** covidDataDTO)
Updates existing COVID-19 data in the database.
- async Task **DeleteDataAsync** (int id)
Deletes COVID-19 data from the database by ID.
- async Task< IEnumerable< **CovidDataDTO** > > **GetDataByCountryAsync** (string country, bool includeGeolocation)
Retrieves COVID-19 data for a specific country, optionally including geolocation information.
- async Task< IEnumerable< string > > **GetAllWeeksAsync** ()
Retrieves a list of unique weeks available in the CovidData records.
- async Task< IEnumerable< **CovidDataDTO** > > **GetTotalCasesAsync** (bool includeGeolocation)
Retrieves total cases data by grouping CovidData records by country and calculating the sum of new cases for each country.
- async Task< IEnumerable< **CovidDataDTO** > > **GetNewCasesAsync** (bool includeGeolocation)
Retrieves new cases data by grouping CovidData records by country and week, calculating the sum of new cases for each country and week.
- async Task< IEnumerable< **CovidDataDTO** > > **GetPopulationDataAsync** (bool includeGeolocation)
Retrieves population data, including the country and population, with an option to include geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetComparisonsAsync** (List< string > countries, bool includeGeolocation)
Retrieves comparison data for specified countries, with an option to include geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetTotalTestsAsync** (bool includeGeolocation)
Retrieves total tests data, including the country and total tests for the specific year, with an option to include geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetGeolocationAsync** (bool includeGeolocation)
Retrieves geolocation data, including the country and geolocation information, with an option to include geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetTestingSourceAsync** (bool includeGeolocation)
Retrieves testing source data, including the country, testing data source, with an option to include geolocation information.
- async Task< string > **GetTestingRateInfoAsync** ()
Retrieves testing rate information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetTestsDoneAsync** (bool includeGeolocation)
Retrieves tests done data, including the country, week, tests done, population, with an option to include geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetPositivityRateAsync** (bool includeGeolocation)
Retrieves positivity rate data, including the country, week, positivity rate, population, with an option to include geolocation information.
- async Task< IEnumerable< **CovidDataDTO** > > **GetTestingRateAsync** (bool includeGeolocation)
Retrieves testing rate data, including the country, week, testing rate, population, with an option to include geolocation information.
- async Task< IEnumerable< string > > **GetAllCountriesAsync** ()
Retrieves a list of all countries.

6.7.1 Detailed Description

Service responsible for handling COVID-19 data operations, including fetching, updating, and deleting data.

6.7.2 Constructor & Destructor Documentation

6.7.2.1 CovidDataService()

```
CovidAPI.Services.Rest.CovidDataService.CovidDataService (
    ApplicationDbContext context,
    IGeolocationService geolocationService,
    ILogger< CovidDataService > logger,
    GeolocationCache geolocationCache,
    IOptions< DbContextOptions< ApplicationDbContext > > dbContextOptions )
```

6.7.3 Member Function Documentation

6.7.3.1 AddDataAsync()

```
async Task CovidAPI.Services.Rest.CovidDataService.AddDataAsync (
    CovidDataDTO covidDataDTO )
```

Adds COVID-19 data to the database.

Parameters

<i>covidDataDTO</i>	The COVID-19 data DTO to add.
---------------------	-------------------------------

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.2 DataExistsForCountryAndWeekAsync()

```
async Task< bool > CovidAPI.Services.Rest.CovidDataService.DataExistsForCountryAndWeekAsync (
    string country,
    string week )
```

Checks if data exists for a specific country and week.

Parameters

<i>country</i>	The country for which to check data.
<i>week</i>	The week for which to check data.

Returns

True if data exists; otherwise, false.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

Here is the call graph for this function:

6.7.3.3 DeleteDataAsync()

```
async Task CovidAPI.Services.Rest.CovidDataService.DeleteDataAsync (
    int id )
```

Deletes COVID-19 data from the database by ID.

Parameters

<i>id</i>	The ID of the COVID-19 data to delete.
-----------	--

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.4 GetAllCountriesAsync()

```
async Task< IEnumerable< string > > CovidAPI.Services.Rest.CovidDataService.GetAllCountries↔
Async ( )
```

Retrieves a list of all countries.

Returns

An asynchronous task that returns a collection of strings representing all countries.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.5 GetAllDataAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetAll↔
DataAsync (
    bool includeGeolocation )
```

Retrieves all COVID-19 data as DTOs, optionally including geolocation information.

Parameters

<i>includeGeolocation</i>	Specifies whether to include geolocation information.
---------------------------	---

Returns

A list of COVID-19 data DTOs.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.6 GetAllWeeksAsync()

```
async Task< IEnumerable< string > > CovidAPI.Services.Rest.CovidDataService.GetAllWeeksAsync
( )
```

Retrieves a list of unique weeks available in the CovidData records.

Returns

An asynchronous task that returns a collection of unique week values.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.7 GetComparisonsAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.Get↔
ComparisonsAsync (
    List< string > countries,
    bool includeGeolocation )
```

Retrieves comparison data for specified countries, with an option to include geolocation information.

Parameters

<i>countries</i>	A list of country names for which to fetch comparison data.
<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing comparison data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.8 GetDataByCountryAndWeekAsync()

```
async Task< CovidData > CovidAPI.Services.Rest.CovidDataService.GetDataByCountryAndWeekAsync
(
```

```
    string country,  
    string week )
```

Retrieves COVID-19 data for a specific country and week.

Parameters

<i>country</i>	The country for which to retrieve data.
<i>week</i>	The week for which to retrieve data.

Returns

The COVID-19 data for the specified country and week.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

Here is the caller graph for this function:

6.7.3.9 GetDataByCountryAsync()

```

async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetDataByCountryAsync (
    string country,
    bool includeGeolocation )
  
```

Retrieves COVID-19 data for a specific country, optionally including geolocation information.

Parameters

<i>country</i>	The country for which to retrieve data.
<i>includeGeolocation</i>	Specifies whether to include geolocation information.

Returns

A list of COVID-19 data DTOs for the specified country.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.10 GetDataByIdAsync()

```

async Task< CovidDataDTO > CovidAPI.Services.Rest.CovidDataService.GetDataByIdAsync (
    int id,
    bool includeGeolocation )
  
```

Retrieves COVID-19 data for a specific ID.

Parameters

<i>id</i>	The ID of the COVID-19 data to retrieve.
<i>includeGeolocation</i>	Specifies whether to include geolocation information.

Returns

The COVID-19 data DTO for the specified ID.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.11 GetDataByWeekAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetDataByWeekAsync (
    string week,
    bool includeGeolocation )
```

Retrieves COVID-19 data for a specific week, optionally including geolocation information.

Parameters

<i>week</i>	The week for which to retrieve data.
<i>includeGeolocation</i>	Specifies whether to include geolocation information.

Returns

A list of COVID-19 data DTOs for the specified week.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.12 GetDataByYearAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetDataByYearAsync (
    int year,
    bool includeGeolocation )
```

Retrieves COVID-19 data for a specific year, optionally including geolocation information.

Parameters

<i>year</i>	The year for which to retrieve data.
<i>includeGeolocation</i>	Specifies whether to include geolocation information.

Returns

A list of COVID-19 data DTOs for the specified year.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.13 GetGeolocationAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.Get↔  
GeolocationAsync (   
    bool includeGeolocation )
```

Retrieves geolocation data, including the country and geolocation information, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing geolocation data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.14 GetNewCasesAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetNew↔  
CasesAsync (   
    bool includeGeolocation )
```

Retrieves new cases data by grouping CovidData records by country and week, calculating the sum of new cases for each country and week.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing new cases data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.15 GetPopulationDataAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.Get↔  
PopulationDataAsync (   
    bool includeGeolocation )
```

Retrieves population data, including the country and population, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing population data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.16 GetPositivityRateAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.Get↔  
PositivityRateAsync (   
    bool includeGeolocation )
```

Retrieves positivity rate data, including the country, week, positivity rate, population, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing positivity rate data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.17 GetTestingRateAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.Get↔  
TestingRateAsync (   
    bool includeGeolocation )
```

Retrieves testing rate data, including the country, week, testing rate, population, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing testing rate data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.18 GetTestingRateInfoAsync()

```
async Task< string > CovidAPI.Services.Rest.CovidDataService.GetTestingRateInfoAsync ( )
```

Retrieves testing rate information.

Returns

An asynchronous task that returns a string representing testing rate information.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.19 GetTestingSourceAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetTestingSourceAsync (
    bool includeGeolocation )
```

Retrieves testing source data, including the country, testing data source, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing testing source data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.20 GetTestsDoneAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetTestsDoneAsync (
    bool includeGeolocation )
```

Retrieves tests done data, including the country, week, tests done, population, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing tests done data.

6.7.3.21 GetTotalCasesAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetTotalCasesAsync (
    bool includeGeolocation )
```

Retrieves total cases data by grouping CovidData records by country and calculating the sum of new cases for each country.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing total cases data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.22 GetTotalTestsAsync()

```
async Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.CovidDataService.GetTotalTestsAsync (
    bool includeGeolocation )
```

Retrieves total tests data, including the country and total tests for the specific year, with an option to include geolocation information.

Parameters

<i>includeGeolocation</i>	A flag indicating whether to include geolocation data in the results.
---------------------------	---

Returns

An asynchronous task that returns a collection of CovidDataDTO objects representing total tests data.

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

6.7.3.23 UpdateDataAsync()

```
async Task CovidAPI.Services.Rest.CovidDataService.UpdateDataAsync (
    CovidDataDTO covidDataDTO )
```

Updates existing COVID-19 data in the database.

Parameters

<i>covidDataDTO</i>	The COVID-19 data DTO with updated information.
---------------------	---

Implements **CovidAPI.Services.Rest.ICovidDataService** (p. ??).

The documentation for this class was generated from the following file:

- Services/Rest/ **CovidDataService.cs**

6.8 CovidAPI.Models.ErrorResponse Class Reference

Represents an error response containing information about an error.

Collaboration diagram for CovidAPI.Models.ErrorResponse:

CovidAPI.Models.ErrorResponse	
+	ErrorCode
+	Message
+	ToString()

Public Member Functions

- override string **ToString** ()
Converts the object to its equivalent JSON representation.

Properties

- int **ErrorCode** [get, set]
Gets or sets the error code associated with the error.
- string **Message** [get, set]
Gets or sets the error message providing details about the encountered error.

6.8.1 Detailed Description

Represents an error response containing information about an error.

6.8.2 Member Function Documentation

6.8.2.1 ToString()

```
override string CovidAPI.Models.ErrorResponse.ToString ( )
```

Converts the object to its equivalent JSON representation.

Returns

A JSON string representing the current object.

Here is the caller graph for this function:

6.8.3 Property Documentation

6.8.3.1 ErrorCode

```
int CovidAPI.Models.ErrorResponse.ErrorCode [get], [set]
```

Gets or sets the error code associated with the error.

6.8.3.2 Message

```
string CovidAPI.Models.ErrorResponse.Message [get], [set]
```

Gets or sets the error message providing details about the encountered error.

The documentation for this class was generated from the following file:

- Models/ **ErrorResponse.cs**

6.9 GeolocationApiResponse Class Reference

Represents the response from a geolocation API.

Collaboration diagram for GeolocationApiResponse:

Properties

- **List< GeolocationResult > Results** [get, set]
Gets or sets the list of geolocation results.

6.9.1 Detailed Description

Represents the response from a geolocation API.

6.9.2 Property Documentation

6.9.2.1 Results

```
List< GeolocationResult> GeolocationApiResponse.Results [get], [set]
```

Gets or sets the list of geolocation results.

The documentation for this class was generated from the following file:

- Models/ **GeolocationApiResponse.cs**

6.10 GeolocationCache Class Reference

Represents a cache for storing geolocation data to avoid redundant API calls.

Collaboration diagram for GeolocationCache:

Public Member Functions

- **GeolocationCache** ()
- bool **TryGetFromCache** (string country, out **GeolocationApiResponse** geolocationResponse)
Tries to retrieve geolocation data from the cache for a specific country.
- void **AddToCache** (string country, **GeolocationApiResponse** geolocationResponse)
Adds geolocation data to the cache for a specific country.

6.10.1 Detailed Description

Represents a cache for storing geolocation data to avoid redundant API calls.

6.10.2 Constructor & Destructor Documentation

6.10.2.1 GeolocationCache()

```
GeolocationCache.GeolocationCache ( )
```

6.10.3 Member Function Documentation

6.10.3.1 AddToCache()

```
void GeolocationCache.AddToCache (
    string country,
    GeolocationApiResponse geolocationResponse )
```

Adds geolocation data to the cache for a specific country.

Parameters

<i>country</i>	The country for which to add geolocation data to the cache.
<i>geolocationResponse</i>	The geolocation response to be added to the cache.

6.10.3.2 TryGetFromCache()

```
bool GeolocationCache.TryGetFromCache (
    string country,
    out GeolocationApiResponse geolocationResponse )
```

Tries to retrieve geolocation data from the cache for a specific country.

Parameters

<i>country</i>	The country for which to retrieve geolocation data.
<i>geolocationResponse</i>	The retrieved geolocation response if successful.

Returns

True if the data is successfully retrieved from the cache; otherwise, false.

The documentation for this class was generated from the following file:

- Services/Rest/ **GeolocationService.cs**

6.11 GeolocationComponents Class Reference

Represents the components of a geolocation.

Collaboration diagram for GeolocationComponents:

Properties

- string **Country** [get, set]
Gets or sets the country of the geolocation.

6.11.1 Detailed Description

Represents the components of a geolocation.

6.11.2 Property Documentation

6.11.2.1 Country

```
string GeolocationComponents.Country [get], [set]
```

Gets or sets the country of the geolocation.

The documentation for this class was generated from the following file:

- Models/ **GeolocationApiResponse.cs**

6.12 GeolocationResult Class Reference

Represents a geolocation result.

Collaboration diagram for GeolocationResult:

Properties

- **GeolocationComponents Components** [get, set]
Gets or sets the components of the geolocation.
- **Geometry Geometry** [get, set]
Gets or sets the geometry information of the geolocation.

6.12.1 Detailed Description

Represents a geolocation result.

6.12.2 Property Documentation

6.12.2.1 Components

GeolocationComponents `GeolocationResult.Components` [get], [set]

Gets or sets the components of the geolocation.

6.12.2.2 Geometry

Geometry `GeolocationResult.Geometry` [get], [set]

Gets or sets the geometry information of the geolocation.

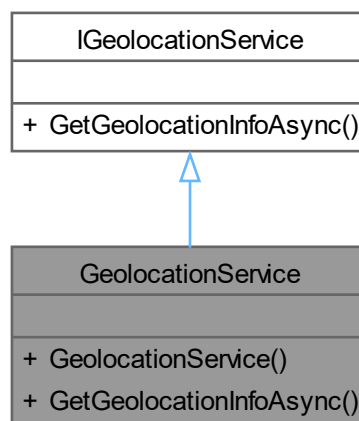

The documentation for this class was generated from the following file:

- Models/ **GeolocationApiResponse.cs**

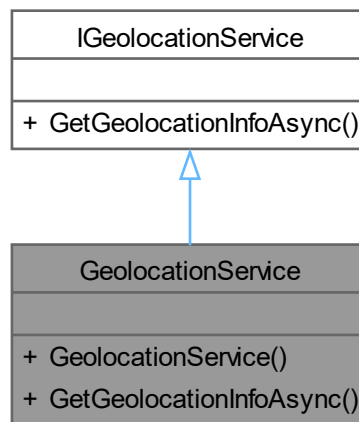

6.13 GeolocationService Class Reference

Represents a service for retrieving geolocation information for a specific country.

Inheritance diagram for GeolocationService:

Collaboration diagram for GeolocationService:

Public Member Functions

- **GeolocationService** (IHttpClientFactory httpClientFactory, IConfiguration configuration, ILogger< **GeolocationService** > logger, **GeolocationCache** geolocationCache, IDistributedCache distributedCache)
- async Task< **GeolocationApiResponse** > **GetGeolocationInfoAsync** (string country)
Retrieves geolocation information asynchronously for a specific country.

6.13.1 Detailed Description

Represents a service for retrieving geolocation information for a specific country.

6.13.2 Constructor & Destructor Documentation

6.13.2.1 GeolocationService()

```

GeolocationService.GeolocationService (
    IHttpClientFactory httpClientFactory,
    IConfiguration configuration,
    ILogger< GeolocationService > logger,
    GeolocationCache geolocationCache,
    IDistributedCache distributedCache )
  
```

6.13.3 Member Function Documentation

6.13.3.1 GetGeolocationInfoAsync()

```

async Task< GeolocationApiResponse > GeolocationService.GetGeolocationInfoAsync (
    string country )
  
```

Retrieves geolocation information asynchronously for a specific country.

Parameters

<code>country</code>	The country for which to retrieve geolocation information.
----------------------	--

Returns

An asynchronous task that returns the geolocation response.

Implements **IGeolocationService** (p. ??).

The documentation for this class was generated from the following file:

- Services/Rest/ **GeolocationService.cs**

6.14 Geometry Class Reference

Represents the geometry information of a geolocation.

Collaboration diagram for Geometry:

Properties

- double **Lat** [get, set]
Gets or sets the latitude of the geolocation.
- double **Lng** [get, set]
Gets or sets the longitude of the geolocation.

6.14.1 Detailed Description

Represents the geometry information of a geolocation.

6.14.2 Property Documentation

6.14.2.1 Lat

```
double Geometry.Lat [get], [set]
```

Gets or sets the latitude of the geolocation.

6.14.2.2 Lng

```
double Geometry.Lng [get], [set]
```

Gets or sets the longitude of the geolocation.

The documentation for this class was generated from the following file:

- Models/ **GeolocationApiResponse.cs**

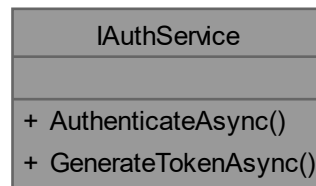

6.15 IAuthService Interface Reference

Defines authentication service methods.

Inheritance diagram for IAuthService:

Collaboration diagram for IAuthService:

Public Member Functions

- Task< string > **AuthenticateAsync** (string username, string password)
Authenticates a user based on the provided username and password.
- Task< string > **GenerateTokenAsync** (**User** user)
Generates an authentication token for the specified user.

6.15.1 Detailed Description

Defines authentication service methods.

6.15.2 Member Function Documentation

6.15.2.1 AuthenticateAsync()

```
Task< string > IAuthService.AuthenticateAsync (
    string username,
    string password )
```

Authenticates a user based on the provided username and password.

Parameters

<i>username</i>	The username of the user.
<i>password</i>	The password of the user.

Returns

A task that represents the asynchronous operation. The task result contains an authentication token.

Implemented in **AuthService** (p. ??).

6.15.2.2 GenerateTokenAsync()

```
Task< string > IAuthService.GenerateTokenAsync (
    User user )
```

Generates an authentication token for the specified user.

Parameters

<i>user</i>	The user for whom the token should be generated.
-------------	--

Returns

A task that represents the asynchronous operation. The task result contains an authentication token.

Implemented in **AuthService** (p. ??).

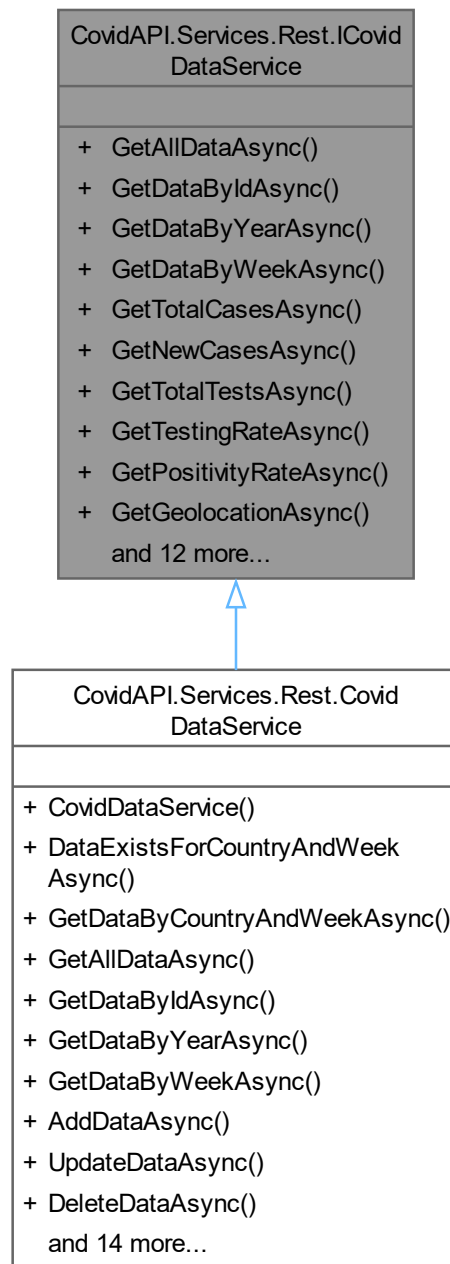

The documentation for this interface was generated from the following file:

- Services/Rest/ **IAuthService.cs**

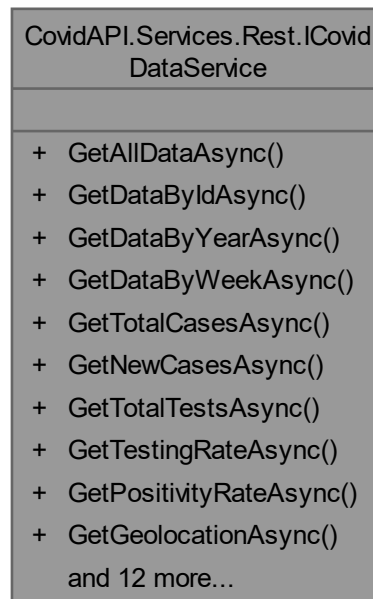

6.16 CovidAPI.Services.Rest.ICovidDataService Interface Reference

Defines methods for retrieving and managing COVID-19 data.

Inheritance diagram for CovidAPI.Services.Rest.ICovidDataService:

Collaboration diagram for CovidAPI.Services.Rest.ICovidDataService:

Public Member Functions

- Task< IEnumerable< **CovidDataDTO** > > **GetAllDataAsync** (bool includeGeolocation)
Gets all COVID-19 data.
- Task< **CovidDataDTO** > **GetDataByIdAsync** (int id, bool includeGeolocation)
Gets COVID-19 data by identifier.
- Task< IEnumerable< **CovidDataDTO** > > **GetDataByYearAsync** (int year, bool includeGeolocation)
Gets COVID-19 data for a specific year.
- Task< IEnumerable< **CovidDataDTO** > > **GetDataByWeekAsync** (string week, bool includeGeolocation)
Gets COVID-19 data for a specific week.
- Task< IEnumerable< **CovidDataDTO** > > **GetTotalCasesAsync** (bool includeGeolocation)
Gets the total COVID-19 cases.
- Task< IEnumerable< **CovidDataDTO** > > **GetNewCasesAsync** (bool includeGeolocation)
Gets COVID-19 data for new cases.
- Task< IEnumerable< **CovidDataDTO** > > **GetTotalTestsAsync** (bool includeGeolocation)
Gets the total COVID-19 tests.
- Task< IEnumerable< **CovidDataDTO** > > **GetTestingRateAsync** (bool includeGeolocation)
Gets the COVID-19 testing rate.
- Task< IEnumerable< **CovidDataDTO** > > **GetPositivityRateAsync** (bool includeGeolocation)
Gets the COVID-19 positivity rate.
- Task< IEnumerable< **CovidDataDTO** > > **GetGeolocationAsync** (bool includeGeolocation)
Gets COVID-19 geolocation data.
- Task< IEnumerable< **CovidDataDTO** > > **GetTestingSourceAsync** (bool includeGeolocation)
Gets COVID-19 testing source data.

- Task< IEnumerable< **CovidDataDTO** > > **GetComparisonsAsync** (List< string > countries, bool includeGeolocation)
Gets COVID-19 data for specified countries and includes geolocation information if requested.
- Task< IEnumerable< **CovidDataDTO** > > **GetPopulationDataAsync** (bool includeGeolocation)
Gets COVID-19 population data.
- Task< IEnumerable< string > > **GetAllWeeksAsync** ()
Gets a collection of all distinct weeks for COVID-19 data.
- Task< string > **GetTestingRateInfoAsync** ()
Gets information about COVID-19 testing rates.
- Task< IEnumerable< string > > **GetAllCountriesAsync** ()
Gets a collection of all distinct countries for COVID-19 data.
- Task< bool > **DataExistsForCountryAndWeekAsync** (string country, string week)
Checks whether COVID-19 data exists for a specific country and week.
- Task< **CovidData** > **GetDataByCountryAndWeekAsync** (string country, string week)
Gets COVID-19 data for a specific country and week.
- Task **AddDataAsync** (**CovidDataDTO** covidDataDTO)
Adds new COVID-19 data using the provided data transfer object (DTO).
- Task **UpdateDataAsync** (**CovidDataDTO** covidDataDTO)
Updates existing COVID-19 data using the provided data transfer object (DTO).
- Task **DeleteDataAsync** (int id)
Deletes COVID-19 data with the specified identifier.
- Task< IEnumerable< **CovidDataDTO** > > **GetDataByCountryAsync** (string country, bool includeGeolocation)
Gets COVID-19 data for a specific country with an option to include geolocation information.

6.16.1 Detailed Description

Defines methods for retrieving and managing COVID-19 data.

6.16.2 Member Function Documentation

6.16.2.1 AddDataAsync()

```
Task CovidAPI.Services.Rest.ICovidDataService.AddDataAsync (
    CovidDataDTO covidDataDTO )
```

Adds new COVID-19 data using the provided data transfer object (DTO).

Parameters

<i>covidDataDTO</i>	The data transfer object containing COVID-19 data.
---------------------	--

Returns

A task that represents the asynchronous operation.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.2 DataExistsForCountryAndWeekAsync()

```
Task< bool > CovidAPI.Services.Rest.ICovidDataService.DataExistsForCountryAndWeekAsync (
    string country,
    string week )
```

Checks whether COVID-19 data exists for a specific country and week.

Parameters

<i>country</i>	The name of the country.
<i>week</i>	The week for which data existence is checked.

Returns

A task that represents the asynchronous operation. The task result is a boolean indicating whether data exists.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.3 DeleteDataAsync()

```
Task CovidAPI.Services.Rest.ICovidDataService.DeleteDataAsync (
    int id )
```

Deletes COVID-19 data with the specified identifier.

Parameters

<i>id</i>	The unique identifier of the COVID-19 data.
-----------	---

Returns

A task that represents the asynchronous operation.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.4 GetAllCountriesAsync()

```
Task< IEnumerable< string > > CovidAPI.Services.Rest.ICovidDataService.GetAllCountriesAsync (
)
```

Gets a collection of all distinct countries for COVID-19 data.

Returns

A task that represents the asynchronous operation. The task result contains a collection of strings representing distinct countries.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.5 GetAllDataAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetAllDataAsync  
(  
    bool includeGeolocation )
```

Gets all COVID-19 data.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.6 GetAllWeeksAsync()

```
Task< IEnumerable< string > > CovidAPI.Services.Rest.ICovidDataService.GetAllWeeksAsync ( )
```

Gets a collection of all distinct weeks for COVID-19 data.

Returns

A task that represents the asynchronous operation. The task result contains a collection of strings representing distinct weeks.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.7 GetComparisonsAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetComparisons↵  
Async (   
    List< string > countries,  
    bool includeGeolocation )
```

Gets COVID-19 data for specified countries and includes geolocation information if requested.

Parameters

<i>countries</i>	A list of country names to retrieve data for.
<i>includeGeolocation</i>	Indicates whether to include geolocation information.

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data for the specified countries.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.8 GetDataByCountryAndWeekAsync()

```
Task< CovidData > CovidAPI.Services.Rest.ICovidDataService.GetDataByCountryAndWeekAsync (
    string country,
    string week )
```

Gets COVID-19 data for a specific country and week.

Parameters

<i>country</i>	The name of the country.
<i>week</i>	The week for which data is retrieved.

Returns

A task that represents the asynchronous operation. The task result contains a CovidData object.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.9 GetDataByCountryAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetDataByCountryAsync (
    string country,
    bool includeGeolocation )
```

Gets COVID-19 data for a specific country with an option to include geolocation information.

Parameters

<i>country</i>	The name of the country.
<i>includeGeolocation</i>	A flag indicating whether to include geolocation information.

Returns

A task that represents the asynchronous operation. The task result is a collection of CovidDataDTO objects.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.10 GetDataByIdAsync()

```
Task< CovidDataDTO > CovidAPI.Services.Rest.ICovidDataService.GetDataByIdAsync (
    int id,
    bool includeGeolocation )
```

Gets COVID-19 data by identifier.

Parameters

<i>id</i>	The identifier of the COVID-19 data.
<i>includeGeolocation</i>	Indicates whether to include geolocation information.

Returns

A task that represents the asynchronous operation. The task result contains the COVID-19 data with the specified identifier.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.11 GetDataByWeekAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetDataByWeek↵  
Async (   
    string week,  
    bool includeGeolocation )
```

Gets COVID-19 data for a specific week.

Parameters

<i>week</i>	The week for which to retrieve COVID-19 data.
<i>includeGeolocation</i>	Indicates whether to include geolocation information.

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data for the specified week.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.12 GetDataByYearAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetDataByYear↵  
Async (   
    int year,  
    bool includeGeolocation )
```

Gets COVID-19 data for a specific year.

Parameters

<i>year</i>	The year for which to retrieve COVID-19 data.
<i>includeGeolocation</i>	Indicates whether to include geolocation information.

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data for the specified year.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.13 GetGeolocationAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetGeolocation↔
Async (
    bool includeGeolocation )
```

Gets COVID-19 geolocation data.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data with geolocation information.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.14 GetNewCasesAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetNewCases↔
Async (
    bool includeGeolocation )
```

Gets COVID-19 data for new cases.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data representing new cases.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.15 GetPopulationDataAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetPopulation↔
DataAsync (
    bool includeGeolocation )
```

Gets COVID-19 population data.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data with population information.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.16 GetPositivityRateAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetPositivityRateAsync (
    bool includeGeolocation )
```

Gets the COVID-19 positivity rate.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data representing the positivity rate.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.17 GetTestingRateAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetTestingRateAsync (
    bool includeGeolocation )
```

Gets the COVID-19 testing rate.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data representing the testing rate.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.18 GetTestingRateInfoAsync()

```
Task< string > CovidAPI.Services.Rest.ICovidDataService.GetTestingRateInfoAsync ( )
```

Gets information about COVID-19 testing rates.

Returns

A task that represents the asynchronous operation. The task result contains a string with information about testing rates.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.19 GetTestingSourceAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetTesting←  
SourceAsync (   
    bool includeGeolocation )
```

Gets COVID-19 testing source data.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data with testing source information.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.20 GetTotalCasesAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetTotalCases←  
Async (   
    bool includeGeolocation )
```

Gets the total COVID-19 cases.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data representing the total cases.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.21 GetTotalTestsAsync()

```
Task< IEnumerable< CovidDataDTO > > CovidAPI.Services.Rest.ICovidDataService.GetTotalTestsAsync (
    bool includeGeolocation )
```

Gets the total COVID-19 tests.

Parameters

<i>includeGeolocation</i>	Indicates whether to include geolocation information.
---------------------------	---

Returns

A task that represents the asynchronous operation. The task result contains a collection of COVID-19 data representing the total tests.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

6.16.2.22 UpdateDataAsync()

```
Task CovidAPI.Services.Rest.ICovidDataService.UpdateDataAsync (
    CovidDataDTO covidDataDTO )
```

Updates existing COVID-19 data using the provided data transfer object (DTO).

Parameters

<i>covidDataDTO</i>	The data transfer object containing updated COVID-19 data.
---------------------	--

Returns

A task that represents the asynchronous operation.

Implemented in **CovidAPI.Services.Rest.CovidDataService** (p. ??).

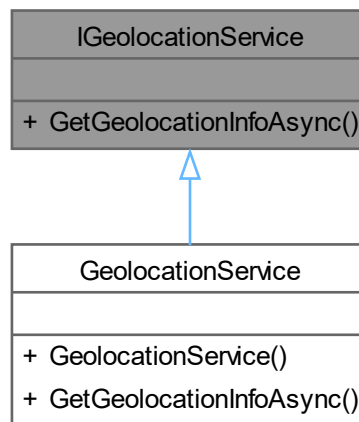

The documentation for this interface was generated from the following file:

- Services/Rest/ **ICovidDataService.cs**

6.17 IGeolocationService Interface Reference

Represents a service for retrieving geolocation information related to COVID-19 data.

Inheritance diagram for IGeolocationService:

Collaboration diagram for IGeolocationService:

Public Member Functions

- `Task< GeolocationApiResponse > GetGeolocationInfoAsync (string country)`
Gets geolocation information asynchronously for the specified country.

6.17.1 Detailed Description

Represents a service for retrieving geolocation information related to COVID-19 data.

6.17.2 Member Function Documentation

6.17.2.1 GetGeolocationInfoAsync()

```
Task< GeolocationApiResponse > IGeolocationService.GetGeolocationInfoAsync (
    string country )
```

Gets geolocation information asynchronously for the specified country.

Parameters

<i>country</i>	The name of the country for which geolocation information is requested.
----------------	---

Returns

A task that represents the asynchronous operation. The task result is a **GeolocationApiResponse** (p. ??) object.

Implemented in **GeolocationService** (p. ??).

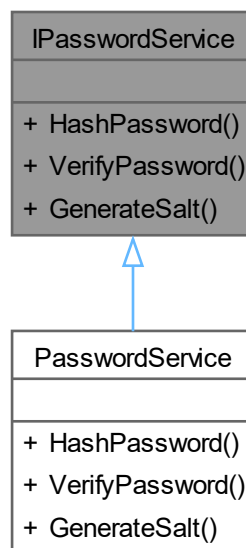

The documentation for this interface was generated from the following file:

- Services/Rest/ **IGeolocationService.cs**

6.18 IPasswordService Interface Reference

Represents a service for hashing, verifying passwords, and generating password salts.

Inheritance diagram for IPasswordService:

Collaboration diagram for IPasswordService:

Public Member Functions

- `byte[] HashPassword` (string password, out string salt)
Hashes the provided password and generates a salt.
- `bool VerifyPassword` (string password, byte[] storedHash, string storedSalt)
Verifies if the provided password matches the stored hash and salt.
- `string GenerateSalt` ()
Generates a random salt for password hashing.

6.18.1 Detailed Description

Represents a service for hashing, verifying passwords, and generating password salts.

6.18.2 Member Function Documentation

6.18.2.1 GenerateSalt()

```
string IPasswordService.GenerateSalt ( )
```

Generates a random salt for password hashing.

Returns

The generated salt as a string.

Implemented in **PasswordService** (p. ??).

6.18.2.2 HashPassword()

```
byte[] IPasswordService.HashPassword (
    string password,
    out string salt )
```

Hashes the provided password and generates a salt.

Parameters

<i>password</i>	The password to be hashed.
<i>salt</i>	The generated salt used in the hashing process.

Returns

The hashed password as a byte array.

Implemented in **PasswordService** (p. ??).

6.18.2.3 VerifyPassword()

```
bool IPasswordService.VerifyPassword (
    string password,
    byte[] storedHash,
    string storedSalt )
```

Verifies if the provided password matches the stored hash and salt.

Parameters

<i>password</i>	The password to be verified.
<i>storedHash</i>	The stored hashed password.
<i>storedSalt</i>	The stored salt used in the hashing process.

Returns

True if the password is verified; otherwise, false.

Implemented in **PasswordService** (p. ??).

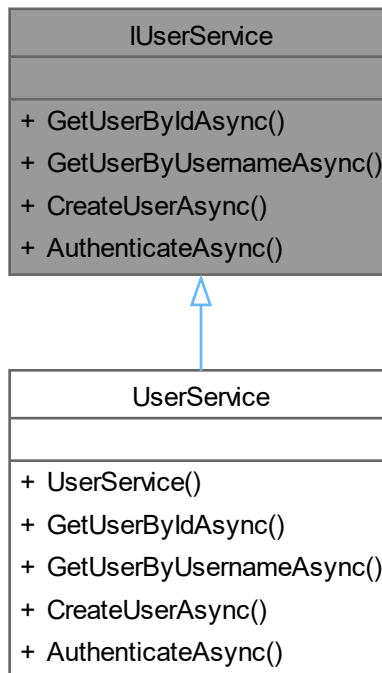

The documentation for this interface was generated from the following file:

- Services/Rest/ **IPasswordService.cs**

6.19 IUserService Interface Reference

Represents a service for managing user-related operations.

Inheritance diagram for IUserService:

Collaboration diagram for IUserService:

Public Member Functions

- `Task< User > GetUserByIdAsync (int userId)`
Retrieves a user by their unique identifier asynchronously.
- `Task< User > GetUserByUsernameAsync (string username)`

Retrieves a user by their username asynchronously.

- Task< **User** > **CreateUserAsync** (**User** user, string password)

Creates a new user asynchronously and associates the provided password.

- Task< **User** > **AuthenticateAsync** (string username, string password)

Authenticates a user by verifying the provided username and password asynchronously.

6.19.1 Detailed Description

Represents a service for managing user-related operations.

6.19.2 Member Function Documentation

6.19.2.1 AuthenticateAsync()

```
Task< User > IUserService.AuthenticateAsync (
    string username,
    string password )
```

Authenticates a user by verifying the provided username and password asynchronously.

Parameters

<i>username</i>	The username of the user.
<i>password</i>	The password to be verified.

Returns

A task that represents the asynchronous authentication operation. If authentication is successful, the task holds the authenticated user information; otherwise, it returns null.

Implemented in **UserService** (p. ??).

6.19.2.2 CreateUserAsync()

```
Task< User > IUserService.CreateUserAsync (
    User user,
    string password )
```

Creates a new user asynchronously and associates the provided password.

Parameters

<i>user</i>	The user information to be created.
<i>password</i>	The password to be associated with the user.

Returns

A task that represents the asynchronous operation and holds the created user information.

Implemented in **UserService** (p. ??).

6.19.2.3 GetUserByIdAsync()

```
Task< User > IUserService.GetUserByIdAsync (
    int userId )
```

Retrieves a user by their unique identifier asynchronously.

Parameters

<i>userId</i>	The unique identifier of the user.
---------------	------------------------------------

Returns

A task that represents the asynchronous operation and holds the user information.

Implemented in **UserService** (p. ??).

6.19.2.4 GetUserByUsernameAsync()

```
Task< User > IUserService.GetUserByUsernameAsync (
    string username )
```

Retrieves a user by their username asynchronously.

Parameters

<i>username</i>	The username of the user.
-----------------	---------------------------

Returns

A task that represents the asynchronous operation and holds the user information.

Implemented in **UserService** (p. ??).

The documentation for this interface was generated from the following file:

- Services/Rest/ **IUserService.cs**

6.20 CovidAPI.Models.JwtSettings Class Reference

Represents the settings for JSON Web Token (JWT) authentication.

Collaboration diagram for CovidAPI.Models.JwtSettings:

CovidAPI.Models.JwtSettings	
+	Secret
+	Issuer
+	Audience

Properties

- string **Secret** [get, set]
Gets or sets the secret key used for signing and verifying JWT tokens.
- string **Issuer** [get, set]
Gets or sets the issuer of the JWT token.
- string **Audience** [get, set]
Gets or sets the audience of the JWT token.

6.20.1 Detailed Description

Represents the settings for JSON Web Token (JWT) authentication.

6.20.2 Property Documentation

6.20.2.1 Audience

```
string CovidAPI.Models.JwtSettings.Audience [get], [set]
```

Gets or sets the audience of the JWT token.

6.20.2.2 Issuer

```
string CovidAPI.Models.JwtSettings.Issuer [get], [set]
```

Gets or sets the issuer of the JWT token.

6.20.2.3 Secret

```
string CovidAPI.Models.JwtSettings.Secret [get], [set]
```

Gets or sets the secret key used for signing and verifying JWT tokens.

The documentation for this class was generated from the following file:

- Models/ **JwtSettings.cs**

6.21 CovidAPI.Models.LoginRequestDTO Class Reference

Represents the data transfer object (DTO) for user login requests.

Collaboration diagram for CovidAPI.Models.LoginRequestDTO:

CovidAPI.Models.LoginRequestDTO	
+	Username
+	Password

Properties

- string **Username** [get, set]
Gets or sets the username for the login request.
- string **Password** [get, set]
Gets or sets the password for the login request.

6.21.1 Detailed Description

Represents the data transfer object (DTO) for user login requests.

6.21.2 Property Documentation

6.21.2.1 Password

```
string CovidAPI.Models.LoginRequestDTO.Password [get], [set]
```

Gets or sets the password for the login request.

6.21.2.2 Username

```
string CovidAPI.Models.LoginRequestDTO.Username [get], [set]
```

Gets or sets the username for the login request.

The documentation for this class was generated from the following file:

- Models/ **LoginRequestDTO.cs**

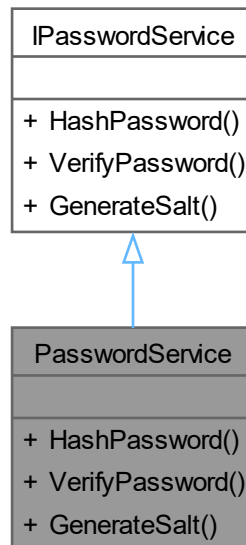

6.22 PasswordService Class Reference

Service for hashing, verifying passwords, and generating salts using BCrypt.

Inheritance diagram for PasswordService:

Collaboration diagram for PasswordService:

Public Member Functions

- `byte[] HashPassword` (string password, out string salt)
Hashes the provided password and generates a salt using BCrypt.
- `bool VerifyPassword` (string password, byte[] storedHash, string storedSalt)
Verifies the provided password against the stored hash and salt using BCrypt.
- `string GenerateSalt` ()
Generates a new salt using BCrypt.

6.22.1 Detailed Description

Service for hashing, verifying passwords, and generating salts using BCrypt.

6.22.2 Member Function Documentation

6.22.2.1 GenerateSalt()

```
string PasswordService.GenerateSalt ( )
```

Generates a new salt using BCrypt.

Returns

The generated salt in BCrypt format.

Implements **IPasswordService** (p. ??).

6.22.2.2 HashPassword()

```
byte[] PasswordService.HashPassword (
    string password,
    out string salt )
```

Hashes the provided password and generates a salt using BCrypt.

Parameters

<i>password</i>	The password to be hashed.
<i>salt</i>	The generated salt in BCrypt format.

Returns

The hashed password as a byte array.

Implements **IPasswordService** (p. ??).

6.22.2.3 VerifyPassword()

```
bool PasswordService.VerifyPassword (
    string password,
    byte[] storedHash,
    string storedSalt )
```

Verifies the provided password against the stored hash and salt using BCrypt.

Parameters

<i>password</i>	The password to be verified.
<i>storedHash</i>	The stored hashed password as a byte array.
<i>storedSalt</i>	The stored salt in BCrypt format.

Returns

True if the password is verified; otherwise, false.

Implements **IPasswordService** (p. ??).

The documentation for this class was generated from the following file:

- Services/Rest/ **PasswordService.cs**

6.23 Program Class Reference

The entry point class for the application.

Collaboration diagram for Program:

Static Public Member Functions

- static void **Main** (string[] args)
The main entry point for the application.
- static IHostBuilder **CreateHostBuilder** (string[] args)
Creates the default host builder for the application.

6.23.1 Detailed Description

The entry point class for the application.

6.23.2 Member Function Documentation

6.23.2.1 CreateHostBuilder()

```
static IHostBuilder Program.CreateHostBuilder (  
    string[] args ) [static]
```

Creates the default host builder for the application.

Parameters

<i>args</i>	Command-line arguments passed to the application.
-------------	---

Returns

The configured host builder.

Here is the caller graph for this function:

**6.23.2.2 Main()**

```
static void Program.Main (  
    string[] args ) [static]
```

The main entry point for the application.

Parameters

<i>args</i>	Command-line arguments passed to the application.
-------------	---

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- **Program.cs**

6.24 CovidAPI.Models.RegisterRequestDTO Class Reference

Represents the data transfer object (DTO) for user registration requests.

Collaboration diagram for CovidAPI.Models.RegisterRequestDTO:

Properties

- string **Username** [get, set]
Gets or sets the username for the registration request.
- string **Password** [get, set]
Gets or sets the password for the registration request.

6.24.1 Detailed Description

Represents the data transfer object (DTO) for user registration requests.

6.24.2 Property Documentation

6.24.2.1 Password

```
string CovidAPI.Models.RegisterRequestDTO.Password [get], [set]
```

Gets or sets the password for the registration request.

6.24.2.2 Username

```
string CovidAPI.Models.RegisterRequestDTO.Username [get], [set]
```

Gets or sets the username for the registration request.

The documentation for this class was generated from the following file:

- Models/ **RegisterRequestDTO.cs**

6.25 CovidAPI.Startup Class Reference

Configures the application services and requests during startup.

Collaboration diagram for CovidAPI.Startup:

Public Member Functions

- **Startup** (IConfiguration configuration)
Initializes a new instance of the Startup class.
- void **ConfigureServices** (IServiceCollection services)
Configures the services used by the application.
- void **Configure** (IApplicationBuilder app, IWebHostEnvironment env)
Configures the HTTP request pipeline.
- void **ConfigureLogging** (IServiceCollection services)
Configures logging services for the application.

Properties

- IConfiguration **Configuration** [get]
Gets the configuration settings.

6.25.1 Detailed Description

Configures the application services and requests during startup.

6.25.2 Constructor & Destructor Documentation

6.25.2.1 Startup()

```
CovidAPI.Startup.Startup (
    IConfiguration configuration )
```

Initializes a new instance of the Startup class.

Parameters

<i>configuration</i>	The configuration settings.
----------------------	-----------------------------

6.25.3 Member Function Documentation

6.25.3.1 Configure()

```
void CovidAPI.Startup.Configure (
    IApplicationBuilder app,
    IWebHostEnvironment env )
```

Configures the HTTP request pipeline.

Parameters

<i>app</i>	The application builder.
<i>env</i>	The hosting environment.

Here is the call graph for this function:

6.25.3.2 ConfigureLogging()

```
void CovidAPI.Startup.ConfigureLogging (
    IServiceCollection services )
```

Configures logging services for the application.

Parameters

<i>services</i>	The service collection.
-----------------	-------------------------

6.25.3.3 ConfigureServices()

```
void CovidAPI.Startup.ConfigureServices (
    IServiceCollection services )
```

Configures the services used by the application.

Parameters

<code>services</code>	The service collection.
-----------------------	-------------------------

6.25.4 Property Documentation

6.25.4.1 Configuration

`IConfiguration CovidAPI.Startup.Configuration [get]`

Gets the configuration settings.

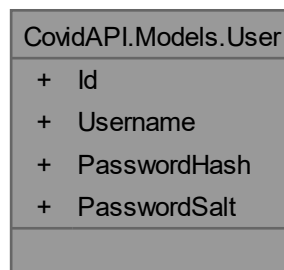

The documentation for this class was generated from the following file:

- **Startup.cs**

6.26 CovidAPI.Models.User Class Reference

Represents a user entity.

Collaboration diagram for CovidAPI.Models.User:

Properties

- `int Id [get, set]`
Gets or sets the unique identifier for the user.
- `string Username [get, set]`
Gets or sets the username of the user.
- `byte[] PasswordHash [get, set]`
Gets or sets the hash of the user's password.
- `string PasswordSalt [get, set]`
Gets or sets the salt used for password hashing.

6.26.1 Detailed Description

Represents a user entity.

6.26.2 Property Documentation

6.26.2.1 Id

```
int CovidAPI.Models.User.Id [get], [set]
```

Gets or sets the unique identifier for the user.

6.26.2.2 PasswordHash

```
byte [] CovidAPI.Models.User.PasswordHash [get], [set]
```

Gets or sets the hash of the user's password.

6.26.2.3 PasswordSalt

```
string CovidAPI.Models.User.PasswordSalt [get], [set]
```

Gets or sets the salt used for password hashing.

6.26.2.4 Username

```
string CovidAPI.Models.User.Username [get], [set]
```

Gets or sets the username of the user.

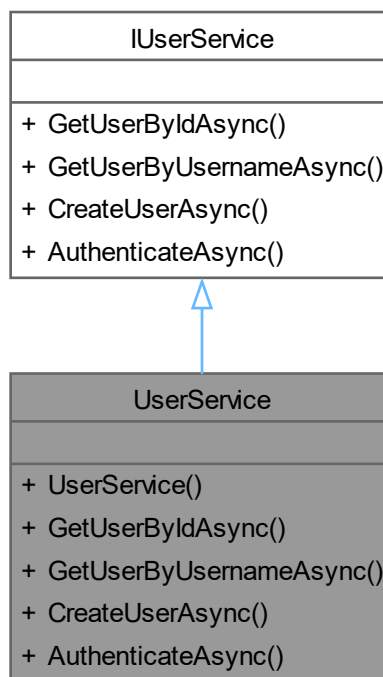

The documentation for this class was generated from the following file:

- Models/ **User.cs**

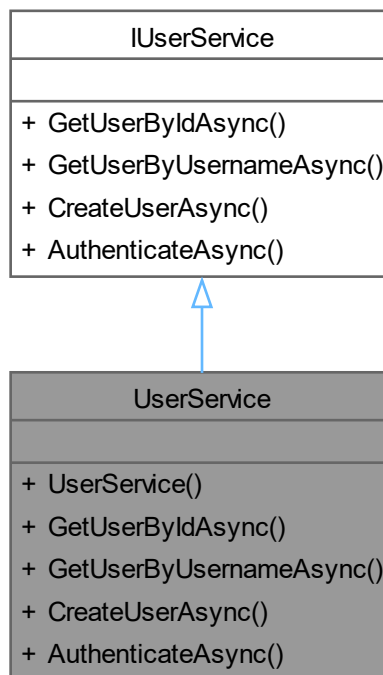

6.27 UserService Class Reference

Service for user-related operations, including authentication and user retrieval.

Inheritance diagram for UserService:

Collaboration diagram for UserService:

Public Member Functions

- **UserService** (**ApplicationDbContext** dbContext, **IPasswordService** passwordService)
*Initializes a new instance of the **UserService** (p. ??) class.*
- async Task< **User** > **GetUserByIdAsync** (int userId)
Gets a user by their unique identifier.
- async Task< **User** > **GetUserByUsernameAsync** (string username)
Gets a user by their username.
- async Task< **User** > **CreateUserAsync** (**User** user, string password)
Creates a new user with the provided information, including password hashing and salting.
- async Task< **User** > **AuthenticateAsync** (string username, string password)
Authenticates a user based on the provided username and password.

6.27.1 Detailed Description

Service for user-related operations, including authentication and user retrieval.

6.27.2 Constructor & Destructor Documentation

6.27.2.1 UserService()

```
UserService.UserService (
    ApplicationDbContext dbContext,
    IPasswordService passwordService )
```

Initializes a new instance of the **UserService** (p. ??) class.

Parameters

<i>dbContext</i>	The application database context.
<i>passwordService</i>	The password service for hashing and verification.

6.27.3 Member Function Documentation

6.27.3.1 AuthenticateAsync()

```
async Task< User > UserService.AuthenticateAsync (
    string username,
    string password )
```

Authenticates a user based on the provided username and password.

Parameters

<i>username</i>	The username of the user.
<i>password</i>	The password to be verified.

Returns

A task representing the asynchronous operation, returning the authenticated user if successful; otherwise, null.

Implements **IUserService** (p. ??).

Here is the call graph for this function:

6.27.3.2 CreateUserAsync()

```
async Task< User > UserService.CreateUserAsync (
    User user,
    string password )
```

Creates a new user with the provided information, including password hashing and salting.

Parameters

<i>user</i>	The user information.
<i>password</i>	The plaintext password to be hashed.

Returns

A task representing the asynchronous operation, returning the created user.

Implements **IUserService** (p. ??).

6.27.3.3 GetUserByIdAsync()

```
async Task< User > UserService.GetUserByIdAsync (
    int userId )
```

Gets a user by their unique identifier.

Parameters

<i>userId</i>	The user's unique identifier.
---------------	-------------------------------

Returns

A task representing the asynchronous operation, returning the user if found; otherwise, null.

Implements **IUserService** (p. ??).

6.27.3.4 GetUserByUsernameAsync()

```
async Task< User > UserService.GetUserByUsernameAsync (
    string username )
```

Gets a user by their username.

Parameters

<i>username</i>	The username of the user to retrieve.
-----------------	---------------------------------------

Returns

A task representing the asynchronous operation, returning the user if found; otherwise, null.

Implements **IUserService** (p. ??).

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- Services/Rest/ **UserService.cs**

Chapter 7

File Documentation

7.1 Controllers/AuthController.cs File Reference

Classes

- class **AuthController**
Controller for authentication-related operations.

7.2 Controllers/CovidDataController.cs File Reference

Classes

- class **CovidDataController**
Controller for COVID-19 data-related operations.

7.3 Data/ApplicationDbContext.cs File Reference

Classes

- class **ApplicationDbContext**
Represents the database context for the application, providing access to data entities.

7.4 Models/CovidData.cs File Reference

Classes

- class **CovidAPI.Models.CovidData**
Represents the Covid-19 data stored in the database.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.5 Models/CovidDataDTO.cs File Reference

Classes

- class **CovidAPI.Models.CovidDataDTO**
Represents a Data Transfer Object (DTO) for presenting Covid-19 data.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.6 Models/ErrorResponse.cs File Reference

Classes

- class **CovidAPI.Models.ErrorResponse**
Represents an error response containing information about an error.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.7 Models/GeolocationApiResponse.cs File Reference

Classes

- class **GeolocationApiResponse**
Represents the response from a geolocation API.
- class **GeolocationResult**
Represents a geolocation result.
- class **GeolocationComponents**
Represents the components of a geolocation.
- class **Geometry**
Represents the geometry information of a geolocation.

7.8 Models/JwtSettings.cs File Reference

Classes

- class **CovidAPI.Models.JwtSettings**
Represents the settings for JSON Web Token (JWT) authentication.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.9 Models/LoginRequestDTO.cs File Reference

Classes

- class **CovidAPI.Models.LoginRequestDTO**
Represents the data transfer object (DTO) for user login requests.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.10 Models/RegisterRequestDTO.cs File Reference

Classes

- class **CovidAPI.Models.RegisterRequestDTO**
Represents the data transfer object (DTO) for user registration requests.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.11 Models/User.cs File Reference

Classes

- class **CovidAPI.Models.User**
Represents a user entity.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Models**

7.19 obj/Release/net6.0/CovidAPI.MvcApplicationPartsAssemblyInfo.cs File Reference

7.20 Program.cs File Reference

Classes

- class **Program**
The entry point class for the application.

7.21 Services/Rest/AuthService.cs File Reference

Classes

- class **AuthService**
Service responsible for user authentication and JWT token generation.

7.22 Services/Rest/CovidDataService.cs File Reference

Classes

- class **CovidAPI.Services.Rest.CovidDataService**
Service responsible for handling COVID-19 data operations, including fetching, updating, and deleting data.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Services**
- namespace **CovidAPI.Services.Rest**

7.23 Services/Rest/GeolocationService.cs File Reference

Classes

- class **GeolocationCache**
Represents a cache for storing geolocation data to avoid redundant API calls.
- class **GeolocationService**
Represents a service for retrieving geolocation information for a specific country.

7.24 Services/Rest/IAuthService.cs File Reference

Classes

- interface **IAuthService**
Defines authentication service methods.

7.25 Services/Rest/ICovidDataService.cs File Reference

Classes

- interface **CovidAPI.Services.Rest.ICovidDataService**
Defines methods for retrieving and managing COVID-19 data.

Namespaces

- namespace **CovidAPI**
- namespace **CovidAPI.Services**
- namespace **CovidAPI.Services.Rest**

7.26 Services/Rest/IGeolocationService.cs File Reference

Classes

- interface **IGeolocationService**

Represents a service for retrieving geolocation information related to COVID-19 data.

7.27 Services/Rest/IPasswordService.cs File Reference

Classes

- interface **IPasswordService**

Represents a service for hashing, verifying passwords, and generating password salts.

7.28 Services/Rest/IUserService.cs File Reference

Classes

- interface **IUserService**

Represents a service for managing user-related operations.

7.29 Services/Rest/PasswordService.cs File Reference

Classes

- class **PasswordService**

Service for hashing, verifying passwords, and generating salts using BCrypt.

7.30 Services/Rest/UserService.cs File Reference

Classes

- class **UserService**

Service for user-related operations, including authentication and user retrieval.

7.31 Startup.cs File Reference

Classes

- class **CovidAPI.Startup**

Configures the application services and requests during startup.

Namespaces

- namespace **CovidAPI**
